BETON REMOKAL C

INHIBITED CONCENTRATED ACID DISINTERSTANT

BETON REMOKAL C removes calcareous and cement rust and encrustations, from concrete mixers and concrete packaging plants. It is far less corrosive than any similar product.

It is an acidic liquid. It has an inhibited, controlled, safe and uniform action, which dissolves incrustations and corrosion, without appreciably affecting the base metal, the well-bonded paints.

It is certainly used on steel, bronze and brass.

INSTRUCTIONS FOR USE

BETON REMOKAL C is used in 10 to 50% solution by immersion or by sprinkling, at room temperature, depending on the extent of the fouling to be removed, except to increase the concentration in the case of exceptionally heavy and tough contaminations.

BETON REMOKAL C should be added to the water slowly, with caution. This product is normally used at room temperature.

In the event of heavy accumulations of grease and oil, these should be removed with alkaline product before treating the parts in the BETON REMOKAL C solution.

Once treated with BETON REMOKAL C, the parts must be washed with running and cold water.

PRECAUTIONS

Consult the safety data sheet.
