

PULIPIETRA ACID

CLEANER FOR BUILDING SURFACES IN ACID BASIS

PULIPIETRA ACID is a product made in response to the rapid and easy cleaning request, economic and complete, façade or outside of buildings.

PULIPIETRA ACID can be used on many types of bricks with the exception of glazed tiles, limestone or marble stone (in this case use PULIPIETRA BASE).

FEATURES

PULIPIETRA ACID is an acid product, viscous, ready to use. Due to its viscosity, it easily adheres to vertical surfaces without penetrating too deeply. This ensures the best results with a lower consumption of the product in the safest way.

It is corrosive to the glass and the surfaces must be protected (MASK OFF can be used) so please ensure that all attackable surfaces are protected. The best results are obtained with roller application.

INSTRUCTIONS FOR USE

In case of weather conditions with high temperatures, it is sometimes recommended to moisten the surfaces to be treated with water, before applying the product.

Apply a thin layer of PULIPIETRA ACID to surfaces using a brush or roller, synthetic or non-atomizing spray Airless.

Leave it to act from 15 minutes to an hour.

Rinse the excess of product with water at low pressure and NEUTRAL BASE Rinse with a pressure washer to remove the detached contaminants. The desired pressure is correlated to the output volume of the pump.

PRECAUTIONS

Before use refer to the material safety data sheet.
