

# ARMASEAL - ASPHALT PRESERVATIVE LAYER

For a Sustainable Asphalt Pavement Preventing Maintenance

## WHAT IS

A cationic bitumen emulsion rich in polymers,  
CE certified with:

- Excellent adhesion,
- Low Penetration (less than 40 PEN)
- High softening point ( $>75^{\circ}\text{C}$ )
- Fast curing (60 - 120 minutes) and
- Excellent storage stability (up to 8 months)

## BENEFITS FROM

- New low cost maintenance procedure extending the functional life of bituminous surfaces postponing the re-surfacing of the wearing course
- Giving "black" appearance to the surface for new markings
- Very quick and easy to apply
- Environmentally friendly - no waste materials

## WHY TO USE

- Stops chipping of aggregates (raveling)
- Seals asphalt road surface against water ingress
- Highly resistant to oxidization protecting existing asphalt binder from ageing
- Minimal effect on Skid Resistance Value or texture depth
- Not affected by salt on roads

## WHERE TO USE

- Suitable for all types of asphalt pavement surfaces: hot mix, SMA, chip seal, micro surface and slurry seal
- Repairs: stops the further deterioration of Alligator cracking, seals the cracks and asphalt road joints
